SKILLS

Programming: Python, Java, C, SQL

Computer Science: Object-Oriented Programming, Data Structures & Algorithms, Database Management, Computer Networks

Backend Development: FastAPI, Flask, REST APIs, WebSockets

Databases: SQL, TimescaleDB

Software & Cloud: Git, GitHub, Docker, IBM Cloud

Data & ML: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, OpenCV

Generative AI: IBM watsonx.ai, IBM Granite Foundation Models, Prompt Engineering

EDUCATION

Vignan's Institute of Management and Technology for Women

2023 – Present

B.Tech in Computer Science and Engineering

CGPA: 8.7

EXPERIENCE

Machine Learning Intern, FlyRank AI

JUL 2026 – SEP 2026

- Engineered end-to-end data pipelines using DuckDB to process search intelligence signals, performing feature engineering, baseline benchmarking, and rigorous model validation.
- Built and deployed a predictive Content Opportunity Scoring Engine to forecast visibility decay, translating complex ML outputs into actionable playbooks.

Generative AI Intern, IBM SkillsBuild x Edunet Foundation

JUN 2026 – JUL 2026

- Developed multiple Generative AI applications using Python, Flask, REST APIs, IBM Cloud, IBM watsonx.ai, and IBM Granite Foundation Models.
- Integrated backend APIs, cloud services, foundation models, and prompt-engineering workflows to build domain-specific application features.

PROJECTS

Mini ERP and CRM Web Application | React, TypeScript, Express.js, PostgreSQL

JUL 2026

- Developed a full-stack ERP and CRM platform for managing customers, products, inventory, and sales, with authentication, role-based access control, dashboards, and pagination.
- Designed REST APIs using Node.js, Express.js, Prisma, and PostgreSQL for business operations, and deployed the multi-tier application using Vercel, Render, and Neon.

AI Climate Risk Prediction Platform | Python, LSTM, Random Forest, GeoAI

APR 2026

- Developed a district-level prediction platform combining LSTM forecasting and Random Forest classification to process temperature and rainfall data and generate 7-day risk predictions across Indian districts.
- Built modular what-if simulation workflows for Flood, Heatwave, and Cyclone scenarios with SHAP-based explanations, transforming model outputs into actionable risk insights.

VerdeChain – ESG Logistics Platform | FastAPI, TimescaleDB, ML

FEB 2026

- Built a backend analytics platform using FastAPI and TimescaleDB, designing an OCR ingestion and SHA-256 deduplication pipeline that reduced freight emissions reporting time from ~2 weeks to under 10 seconds.
- Implemented real-time predictive alerting using WebSockets, 30-day forecasting, and configurable severity thresholds for low-latency delivery of time-sensitive system events.

ACHIEVEMENTS & CERTIFICATIONS

- IBM SkillsBuild Cloud Certification:** Foundations of cloud computing and cloud-native application development.
- AI Fluency: Framework and Foundations – Claude Academy:** Applied the 4D AI Fluency Framework to optimize generative AI tasks and ensure high-integrity outputs.
- IBM SkillsBuild — Getting Started with Cybersecurity:** Completed foundational cybersecurity training.
- GenAI-Powered Data Analytics — Tata iQ (Forge):** Completed a data analytics simulation focused on AI-based credit delinquency prediction.
- Top 10 Finalist — Hackverse 1.0, CodeSprint 2025:** Developed AI/ML solutions in GeoAI weather forecasting and ESG analytics.
